Profile

I turn ambiguous business problems into deployable, testable, and handoff-ready AI products. With experience as a founder, product lead, and engineer, I work end to end across discovery, requirements, architecture, full-stack development, model orchestration, deployment, demos, and delivery. I excel at creating executable paths and owning outcomes under tight timelines and incomplete information.

Susquehanna Prize Led a 24-hour organisational intelligence agent build	ByteDance AI Full-Stack Top 3 Dual-model routing, function calling, and project memory	Founder / CEO Led 7 people; achieved RMB 100K+ single-day revenue
---	--	---

Education

Bachelor of Computer Science · University of New South Wales (UNSW) Sydney · Feb 2025 - Dec 2027 (expected)

Recent AI Projects & Competitions

- Athena | UNSW × Mistral AI × Atlassian Hackathon | Susquehanna Prize** Jul-Aug 2026
 - Led a 24-hour build of a Discord agent for organisational knowledge management that proactively collects team updates and writes source-traceable changes to a live knowledge graph.
 - Owned product architecture and final integration; built the graph core with TypeScript, Next.js, and SQLite, and used Mistral for triage, structured extraction, document ingestion, outbound messaging, and cross-team contradiction detection.
- Lark Loom | ByteDance Feishu AI Campus Challenge | Top 3, AI Full-Stack Development** Apr-May 2026
 - Built a Feishu-native workplace agent that turns meetings, task checks, and performance analysis into traceable project memory.
 - Designed a typed pnpm monorepo, dual-model LLM routing, function calling, and a Feishu Bitable MemoryStore; implemented WebSocket ingestion, HTTP fallback, deduplication, and a cross-platform CLI.
- Akeso | ICON × Lyra Innovation Challenge | Finalist** Jul 2026
 - Delivered an Expo / React Native energy-management app using an Express API, Supabase, and Gemini workflows to turn a 20-second check-in into explainable schedule and nutrition guidance.
 - Owned product decomposition, end-to-end integration, and the pitch flow, converting an ambiguous wellbeing concept into a measurable, explainable, and actionable product loop.

Startup & Professional Experience

- Hypba, Beijing | CEO & Product Lead** Jul 2023-Jul 2024
 - Led product direction, roadmap, team collaboration, architecture, and commercial execution; guided a seven-person team through the complete lifecycle from concept and development to launch and market validation.
 - Worked across backend delivery, deployment, community growth, and product positioning, achieving RMB 100K+ in single-day revenue and closing the loop from technology to market.
- Hanya Investment Consulting, Beijing | Software Operations Engineer** Feb-Apr 2025
 - Maintained enterprise web services and internal automation; improved the PHP + Nginx architecture, supported a Google Cloud migration, and built an FFmpeg media-processing pipeline with operational documentation.

Product & Engineering Projects

- Chiron Prompt | Open-source repo-aware prompt CLI** Sep 2025-Present
Open-source prompt tool for AI coding users with 150+ GitHub stars; supports Gemini CLI, Claude Code, Codex TUI, and Claw Code.
 - Transforms rough requests into high-quality tasks grounded in the project stack, relevant files, git state, acceptance criteria, risks, and verification steps.
 - Designed terminal-first workflows, installers, and low-friction integrations that fit existing coding-agent workflows.
- FinalBoss | AI exam preparation and institutional assessment platform** May 2026-Present
AI study platform serving 150+ users across content upload, mock generation, AI grading, Socratic tutoring, weakness analysis, subscriptions, and institutional delivery.
 - Built a complete workspace with Next.js, Firebase, Stripe, and Judge0, connecting content understanding, question generation, grading, feedback, and tutoring into a continuous learning loop.
 - Independently delivered product flows, information architecture, permissions and payments, live APIs, and institutional handoff across user experience, agent interaction, and commercial validation.
- Fake News Detection | UNSW COMP9444 group project** Jul-Aug 2026
 - Audited, deduplicated, evaluated, and analysed 44,267 English news articles; found 1,399 train-test duplicates and rebuilt leakage-controlled splits.
 - Compared TF-IDF + Logistic Regression, Embedding + BiLSTM, and title-only BERT fine-tuning. Tuned character TF-IDF reached 99.43% accuracy / 99.42% F1 on 8,084 deduplicated test articles, with source and writing-style biases documented.

Capabilities & Tools

Product	User discovery, requirements, PRDs / specs, MVP definition, agent workflows, demo narratives, B2B positioning, commercial validation
AI / Agents	Agent orchestration, prompt / eval loops, BERT fine-tuning, PyTorch, Hugging Face Transformers, function calling, structured outputs, RAG
Engineering	TypeScript, JavaScript, Python, React, Next.js, Node.js, REST APIs, PostgreSQL, SQLite, Firebase, Supabase, Stripe, Docker, CLI
Collaboration	Founder experience, cross-functional teamwork, customer communication, technical writing, requirements clarification, cross-cultural work; English and Mandarin
